NORTHSTAR DIGITAL SOLUTIONS

Sample Company Profile & Employee FAQ

Training document for a Retrieval-Augmented Generation (RAG) Q&A bot

Important: Northstar Digital Solutions is a fictional company created only for software development and RAG practice. All company details in this document are invented.

1. Company Overview

Northstar Digital Solutions (NDS) is a fictional technology services company founded in 2018. It builds web applications, cloud-based business software, data dashboards, and AI-powered support tools for small and medium-sized businesses. Its main office is in Chennai, Tamil Nadu, India. The company also has a remote engineering team working from several cities across India.

Company detail	Information
Legal / display name	Northstar Digital Solutions (NDS)
Founded	2018
Head office	Chennai, Tamil Nadu, India
Industry	Software development and IT services
Company website	www.northstardigital.example (fictional placeholder)
Business hours	Monday–Friday, 9:30 AM–6:00 PM IST
Support email	support@northstardigital.example (fictional placeholder)

2. Mission and Values

Mission: Make useful, reliable digital tools accessible to growing businesses.

Vision: Help organizations improve everyday work through thoughtful software and responsible use of technology.

Values: Customer focus, ownership, teamwork, continuous learning, data privacy, accessibility, and honest communication.

3. Products and Services

Web application development: Designing and building responsive web applications, customer portals, and internal business tools.

Cloud and API integration: Connecting applications to cloud services and third-party APIs, with attention to reliability and security.

Data dashboards: Creating reports and dashboards that help teams understand sales, operations, and customer activity.

AI knowledge assistants: Building Q&A assistants that retrieve relevant information from approved company documents before generating an answer.

Maintenance and support: Fixing defects, applying updates, monitoring application health, and helping customers use delivered software.

4. Departments and Responsibilities

Department	Responsibilities
Engineering	Develops, tests, reviews, deploys, and maintains software.
Product and Design	Collects user needs, prioritizes features, and creates user experience designs.
Quality Assurance (QA)	Tests features, records defects, and verifies fixes before release.
Customer Success	Helps customers onboard, answers product questions, and gathers feedback.
People Operations	Coordinates recruitment, onboarding, leave processes, and employee support.
IT and Security	Manages employee devices, access permissions, security practices, and internal IT support.

5. Hiring and Onboarding

Candidates apply through the careers page or an approved recruitment contact. The usual process is an application review, one or more interviews, and a final decision.

The exact number of interview rounds depends on the role. A typical engineering process may include a technical discussion and a team or hiring-manager discussion.

New employees receive an onboarding checklist, company account access, security guidance, and an introduction to their team.

Recruitment timelines can vary by role and hiring volume. The company does not guarantee a decision date.

6. Workplace Policies

Working hours: Standard office hours are Monday to Friday, 9:30 AM to 6:00 PM IST. Team schedules may differ when agreed with the manager.

Remote work: Some roles may be remote or hybrid when the job description and manager permit it. Applicants should confirm the arrangement for their role.

Leave: Employees request planned leave through the internal leave process and should notify their manager as early as possible.

Security: Employees must use approved tools, protect passwords and access tokens, and report suspected security incidents promptly.

Confidentiality: Internal documents, customer information, credentials, and unreleased product details must not be shared with unauthorized people.

7. Customer Support

Customers should email support@northstardigital.example and include a short description of the issue, the affected product, and steps to reproduce it. They should not send passwords, API keys, payment card details, or other secrets. The support team acknowledges requests during business hours and prioritizes issues based on impact and urgency. The fictional company does not specify a guaranteed resolution time in this sample document.

8. Frequently Asked Questions

Q: What does Northstar Digital Solutions do?

A: It develops web applications, cloud and API integrations, data dashboards, AI knowledge assistants, and software maintenance services.

Q: Where is the company based?

A: Its fictional head office is in Chennai, Tamil Nadu, India.

Q: When was the company founded?

A: The sample profile states that it was founded in 2018.

Q: What are the company's business hours?

A: Monday to Friday, 9:30 AM to 6:00 PM IST.

Q: Which departments does the company have?

A: Engineering, Product and Design, Quality Assurance, Customer Success, People Operations, and IT and Security.

Q: How can a customer contact support?

A: Email support@northstardigital.example, a fictional placeholder address.

Q: Does the company offer remote work?

A: Some roles may be remote or hybrid when permitted by the job description and manager. Applicants should confirm the arrangement for the specific role.

Q: How many interview rounds are there?

A: The number varies by role. A typical engineering process may include a technical discussion and a team or hiring-manager discussion.

Q: Does the company guarantee a hiring decision date?

A: No. Recruitment timelines vary by role and hiring volume.

Q: What should customers include in a support request?

A: A description of the issue, the affected product, and steps to reproduce it. They should not include passwords or other secrets.

Q: What should an employee do if they suspect a security incident?

A: Report it promptly through the company's approved internal security or IT process.

Q: Can the Q&A; bot answer questions not covered in this document?

A: For this sample RAG application, the bot should say the document does not contain enough information rather than inventing an answer.

9. RAG Testing Questions

Use these questions to test retrieval quality and whether your bot avoids unsupported answers:

• What services does the company provide?

• What time does the workday start?

• Which team is responsible for testing software?

• What should a customer avoid including in a support email?

• Does the document state the company's exact employee count?

• What is the guaranteed salary for a new software engineer?

• What is the company's official real-world website?

Expected behavior: answer questions supported by this document. For employee count, guaranteed salary, or a real-world official website, explain that the document does not provide that information.

End of sample document. This fictional content is intended for development and testing only.
